Task Title:

Assignment 4 :OTT Platform Clone.

Task description:

Making a clone of landing page of an OTT platform using HTML, CSS and JavaScript.

Steps Taken:

Usage of HTML and CSS to make the page and used java script for making the page responsive. Can say there is more usage of java script than HTML and CSS.

Challenges Faced:

This time there were no big challenges as such but some alignment challenges were there and some areas involved and required much efforts and time consuming.

Solutions Implemented:

First used HTML and CSS to make the home page. In this task, the usage of java script is very much. In addition, tried fully to make it look like the original OTT Platform-“Amazon Mini TV.”

Learnings:

This task was the most interesting task of all. I have learnt very much through this task. I have learnt more about alignment, html, css, and java script. I have explored very many solutions to get things done according to the idea .And tried to fully make it look like a clone of the OTT Platform.

Project Update:

Hereby I can say that the project is complete.
